

The Department of Laboratory Medicine and Pathology at Mayo Clinic initiated a study to determine stability of analytes under different preservative conditions. This reference chart, built from that study, will enable you to select either temperature conditions or preservatives to maximize the number of tests that can be performed on a single 24-hour collection.

Note: See the Test Catalog for test-specific collection requirements.

The conditions and concentrations of urine preservatives are defined for 24-hour collections as follows:

Ambient	Room temperature (21–25 degrees C)
Refrigerated	4–8 degrees C
Frozen	-20 degrees C
50% Acetic Acid	25 mL per 24-hour collection
Boric Acid (crystals)	10 g per 24-hour collection
Diazolidinyl Urea (250 g/L)	5 mL per 24-hour collection
6M Hydrochloric Acid	30 mL per 24-hour collection
6M Nitric Acid	15 mL per 24-hour collection
Sodium Carbonate (crystals)	5 g per 24-hour collection
Thymol (10% in isopropanol)	10 mL per 24-hour collection
Toluene	30 mL per 24-hour collection

Preservative and condition guidelines have been evaluated specifically for Mayo Clinic Laboratories assays. If you have questions regarding the use of preservatives, contact Mayo Clinic Laboratories at 800-533-1710 or 507-266-5700.
